anacomp®
we make data visible

High-volume digitization, classification, and Intelligent Document Processing (IDP) including physical files, unstructured and structured data, and images

Instant keyword search with data tagging and user-friendly visualization on any data store and over 950 file types

Correct misfiled records to prevent fines and meet compliance objectives

Find and purge ROT (Redundant, Obsolete, Trivial) data to reduce storage costs

Anonymize sensitive data for analytics and research or redact for information requests

Identify proprietary data, sensitive data, and PII for risk mitigation and requests

TIMELY & ACCURATE DIGITAL DATA

Anacomp's D3 digital transformation and data intelligence solutions offer fast, secure, and accurate digitization, data discovery, remediation, and extraction using **Intelligent Document Processing (IDP), Artificial Intelligence (AI), Machine Learning (ML), and Optical Character Recognition (OCR)** to save time, money, and human resources.

We specialize in managing sensitive data. Create timely, accurate, high-quality digital data assets to enable data sharing, data correction and cleaning, and data-based decisions. Our solutions can digitize, index, classify, discover, tag, remediate, redact, and anonymize unstructured data, structured data, physical files, and images.

ENTERPRISE USE CASES

Cloud & Data Migrations and Mergers & Acquisitions	Data Governance for Privacy, Zero Trust & Compliance	Data Discovery for Analytics & Data Intelligence	Data Anonymization & Redaction for Data Sharing & Research
• Digitize, discover, tag, and manage metadata • Real-time indexing of file content, context, and attributes to manage critical data and minimize risk and cost • Locate and mitigate business intelligence and sensitive data before or after M&A or data migration • Merge and purge ROT data using workflows • Integrate with APIs to other systems	• Identify and mitigate Personally Identifiable Information (PII) and other sensitive data • Automated indexing and federated search to tag and workflow for compliance • Correct misfiled data to prevent fines and meet compliance • Dashboard risk filters on over 950 file types • Fast Data Subject Access Requests (DSARs) • Purge ROT data to reduce over-retention risk exposure	• Maximize enterprise data analytics value by identifying and extracting business intelligence, establishing data lineage, and reducing duplication • Crawl, identify, tag, and filter any data store using automated metadata including file content, context, and attributes • Workflow using APIs to data analytics systems	• Automate redaction and anonymization of sensitive data to expedite safe data sharing and harvest data value • Intelligent Document Processing (IDP) automation using AI/ML/OCR technologies enables fast results with fewer manual errors • Customized, human-supervised workflows enable quality control with minimal operator assistance

Create data assets not liabilities with D3 automation delivering up to **200% ROI**
Customers love us for our data accuracy, validation, and security
